

Enhance your current security position with a PCI Accredited Vulnerability Testing Service

Would you like to scan your public facing IP's for vulnerabilities more regularly?

Are you storing credit card information from clients or suppliers?

If the answer to the above is **YES** you may want to know more about **Random Storm**

Many organisations do not regularly scan public facing IP devices. As such they are leaving themselves exposed to threats and vulnerabilities.

Most organisations today have at least some of the following devices in public IP address space

- VPN Appliance
- Routers
- Firewalls
- Web Servers
- DNS Servers
- FTP Servers

Furthermore, with the growth in online trading, many organisations are now storing credit card information from customers and suppliers on their IT systems.

Storing such information creates the need for PCI compliance, hence the need for regular scanning has never been greater, or more affordable.

To help overcome these concerns and compliance needs read more about the benefits of our IP scanning service.

Some of the client benefits of the **RANDOM STORM** IP Scanning and Vulnerability reporting service are as follows:

- Simple to set up scanning service, takes less than 5 minutes
- Non-disruptive
- Policy based scanning pro-actively checks for threats and reduces risk
- Web portal access to simple, yet detailed vulnerability reports
- PCI Accredited service supports compliance and corporate governance requirements
- Helps ensure your 'managed service providers' are meeting their commitments and SLA's on security and patching
- Helps protect your brand from breaches in security
- Provides client confidence
- Cost effective, affordable agreements
- Available for internal and external use

Our simple pricing model is a great way to enhance your security plans today.
